PROFILE

Java Full Stack Developer specialized in Spring Boot, Angular/React, and microservices architectures. Experienced in REST APIs, event-driven systems, real-time processing, and production deployment automation with Docker and CI/CD

PROFESSIONAL EXPERIENCE

Java / Angular / React Full Stack Developer — Team Lead, *AI Mobility Solutions* 03/2025 – Present | Sfax, Tunisia

Project : STATLINK — Statistics, Analytics & Reporting Platform

- Developed reusable React/ApexCharts dashboards with dynamic filters and configurable visualizations, powered by aggregated data exposed through Cube.js.
- Designed Spring Boot/MongoDB REST APIs secured with JWT, with granular user permissions and interface-level access control.
- Implemented Excel/PDF exports, user activity auditing, and an automated email report scheduling service.
- Designed a predictive Python module to anticipate failures, analyze consumption, and detect anomalies.

Tech Stack : Spring Boot, React, TypeScript, ApexCharts, MongoDB, Cube.js, Python, JWT/RBAC, Docker Compose

Project : SAEIV — Real-Time Autonomous Shuttle Supervision

- Designed and developed 8+ Spring Boot microservices within a distributed architecture based on Spring Cloud Gateway, Eureka, and OpenFeign.
- Designed partitioned Kafka streams and Debezium/Kafka Connect CDC pipelines to process real-time changes from source tables holding 22M+ records and growing by 50,000+ rows per day.
- Developed JWT-secured REST APIs integrated with a responsive Angular interface and real-time WebSocket communication.
- Automated and standardized production deployments with Docker Compose, GitHub Actions, and Nginx, reducing manual operations and improving deployment reliability.
- Coordinated technical activities, priorities, code reviews, and developer support.

Tech Stack : Java, Spring Boot, Spring Cloud, Kafka, Debezium/Kafka Connect, Angular, PostgreSQL, WebSocket, Docker/Nginx

Java / Angular Full Stack Developer, *SOFTParadigm* 08/2024 – 03/2025 | Tunis, Tunisia

- Integrated Uber Eats and Deliveroo order flows via WebClient/REST APIs, including authentication, payload mapping, and validation.
- Optimized processing with MongoDB Aggregation, reducing latency by 50%.
- Orchestrated booking workflows using Camunda BPMN.
- Developed REST APIs consumed by Angular and orchestrated business workflows with Camunda BPMN, including testing and systematic code reviews.

Tech Stack : Java, Spring Boot, Angular, MongoDB, WebClient, Camunda BPMN, GitLab
